

# Solar Cell Trainer GES-100

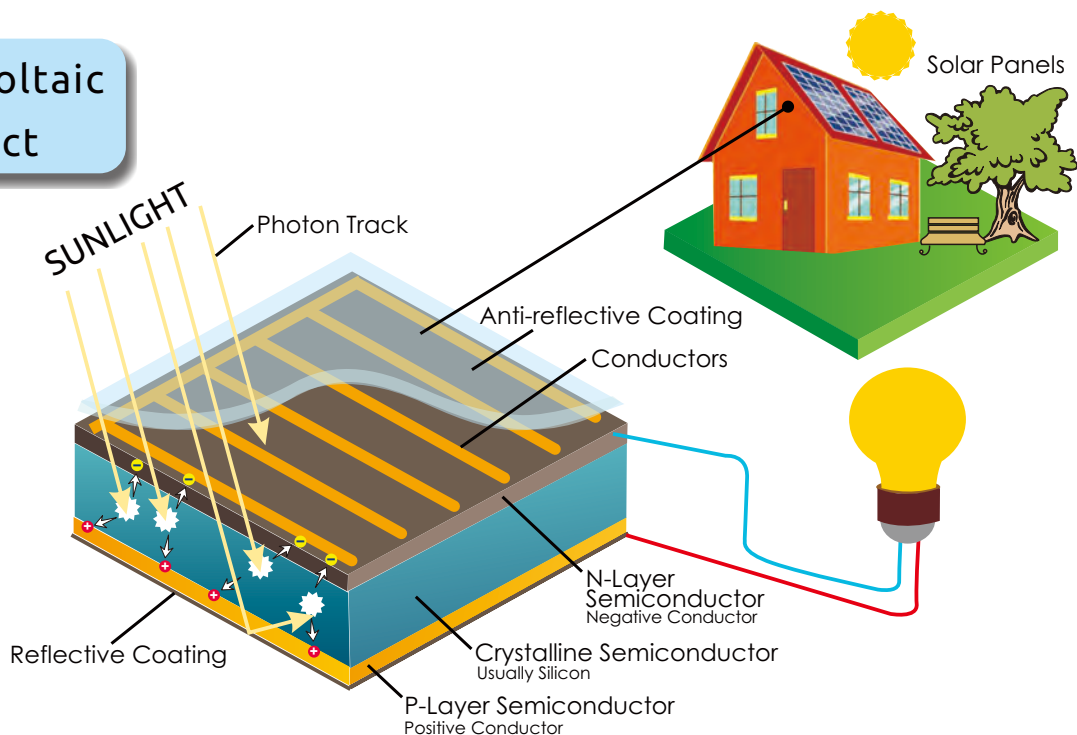

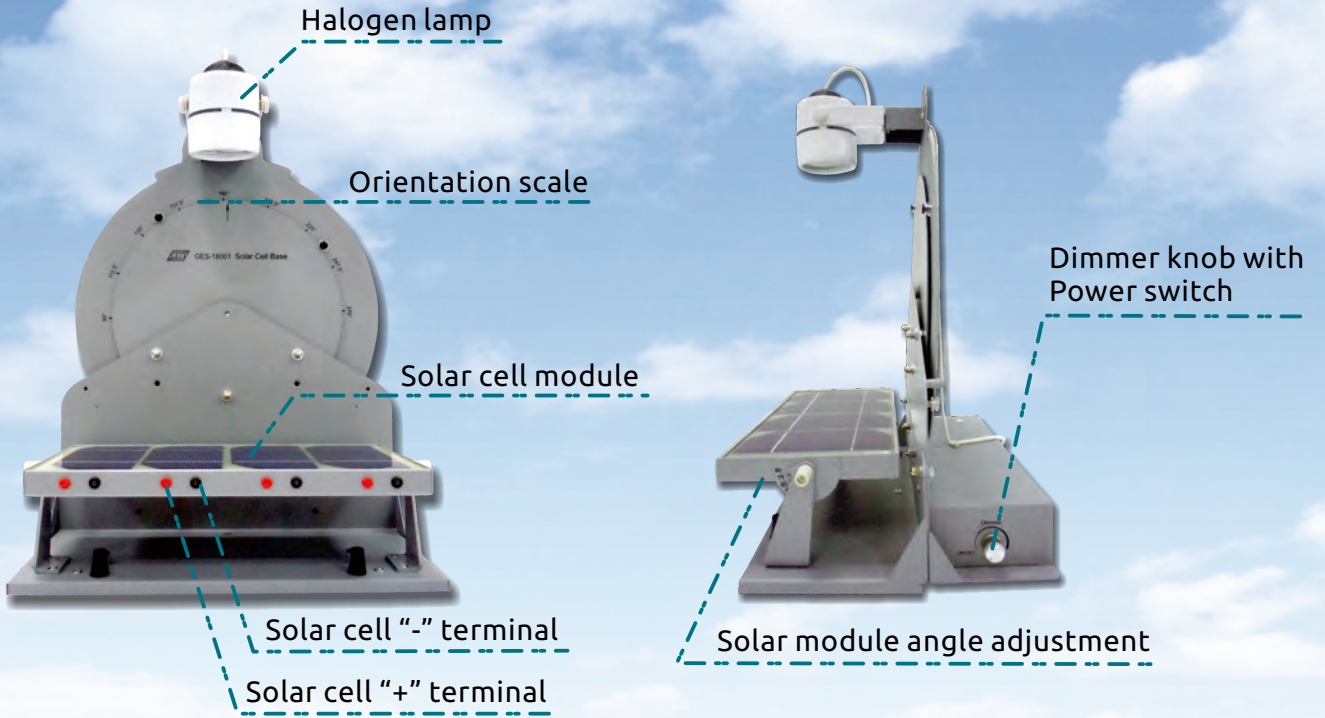

***Solar energy is praised as an inexhaustible energy source***

## Energy Conversion of Solar Cells

A solar cell is an energy converter that converts the energy of light directly into electricity by the photovoltaic effect, which is a physical phenomenon. Adjustable solar cell module (longitude) and a variety of light positions (latitude), which are enough to simulate the change of sunlight in different regions.

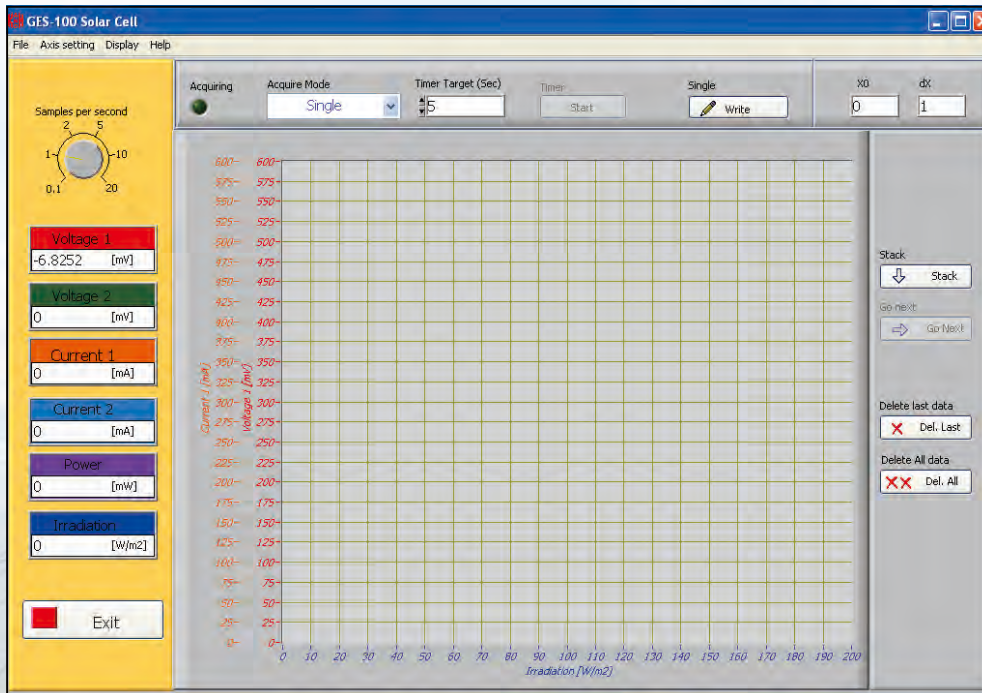

**Photovoltaic Effect**

## Data Acquisition Device with Software

To measure and record the voltage and current values
